# Reliability Is In Our Name

As an industry-leading automotive technology company, Sturdy Automotive provides fleet management solutions that improve fleet safety, operational efficiency, and compliance.

Since the invention of cruise control by Sturdy's very own founder in the mid-1970s, our mission has remained true: to create automotive technology as reliable as our name.

## INCREASED SAFETY

Increased safety by limiting aggressive driving behaviors such as harsh acceleration and speeding while also providing real-time telematics to the fleet manager.

## RETURN ON INVESTMENT

Our solutions pay for themselves in the form of increased fuel economy, decreased maintenance, and reduced insurance liability.

## IMPROVED SUSTAINABILITY

Reusable hardware that accommodates all fleet types. On traditional fleets we reduce carbon emissions while increasing fuel economy, and on fully electric fleets we maximize range while reducing battery cycling, extending serviceable life.

# Primary and Secondary Speed Limits

Establish a routine or primary speed limit for your fleet.

Establish a secondary or occasional speed limit. Especially useful for emergency services and regulated industries.

# Improve Last-Mile Delivery

With last-mile delivery playing a more critical role in fleet operations, organizations are turning to intelligent speed assistance technology to adapt to new challenges.

# Last-Mile Delivery Comprises

## LIMIT SPEED IN REAL-TIME

Fleets frequently operate the last mile in residential areas, where it is imperative to limit speed both for efficiency and safety.

## REDUCE AGGRESSIVE DRIVING

With our acceleration control feature, fleets can reduce aggressive driving behaviors, increasing safety and limiting liability.

## MAXIMIZE FUEL CONSUMPTION

Limiting vehicle speed to the road speed and curbing aggressive acceleration both serve to increase fleet fuel economy.

According to the NHTSB...

**85%** of Speed Citations are Issued Off-Highway

This statistic reflects the challenges and increased risk organizations face during last mile delivery.

# Maximize Electric Vehicle Range

Achieve the maximum rated battery range  
of your electric vehicle and improve fleet  
safety with Sturdy's VMS + Speed IQ  
hardware.

# Designed for Today and Tomorrow

Not yet transitioned to an electric or hydrogen-powered fleet? Not a problem.

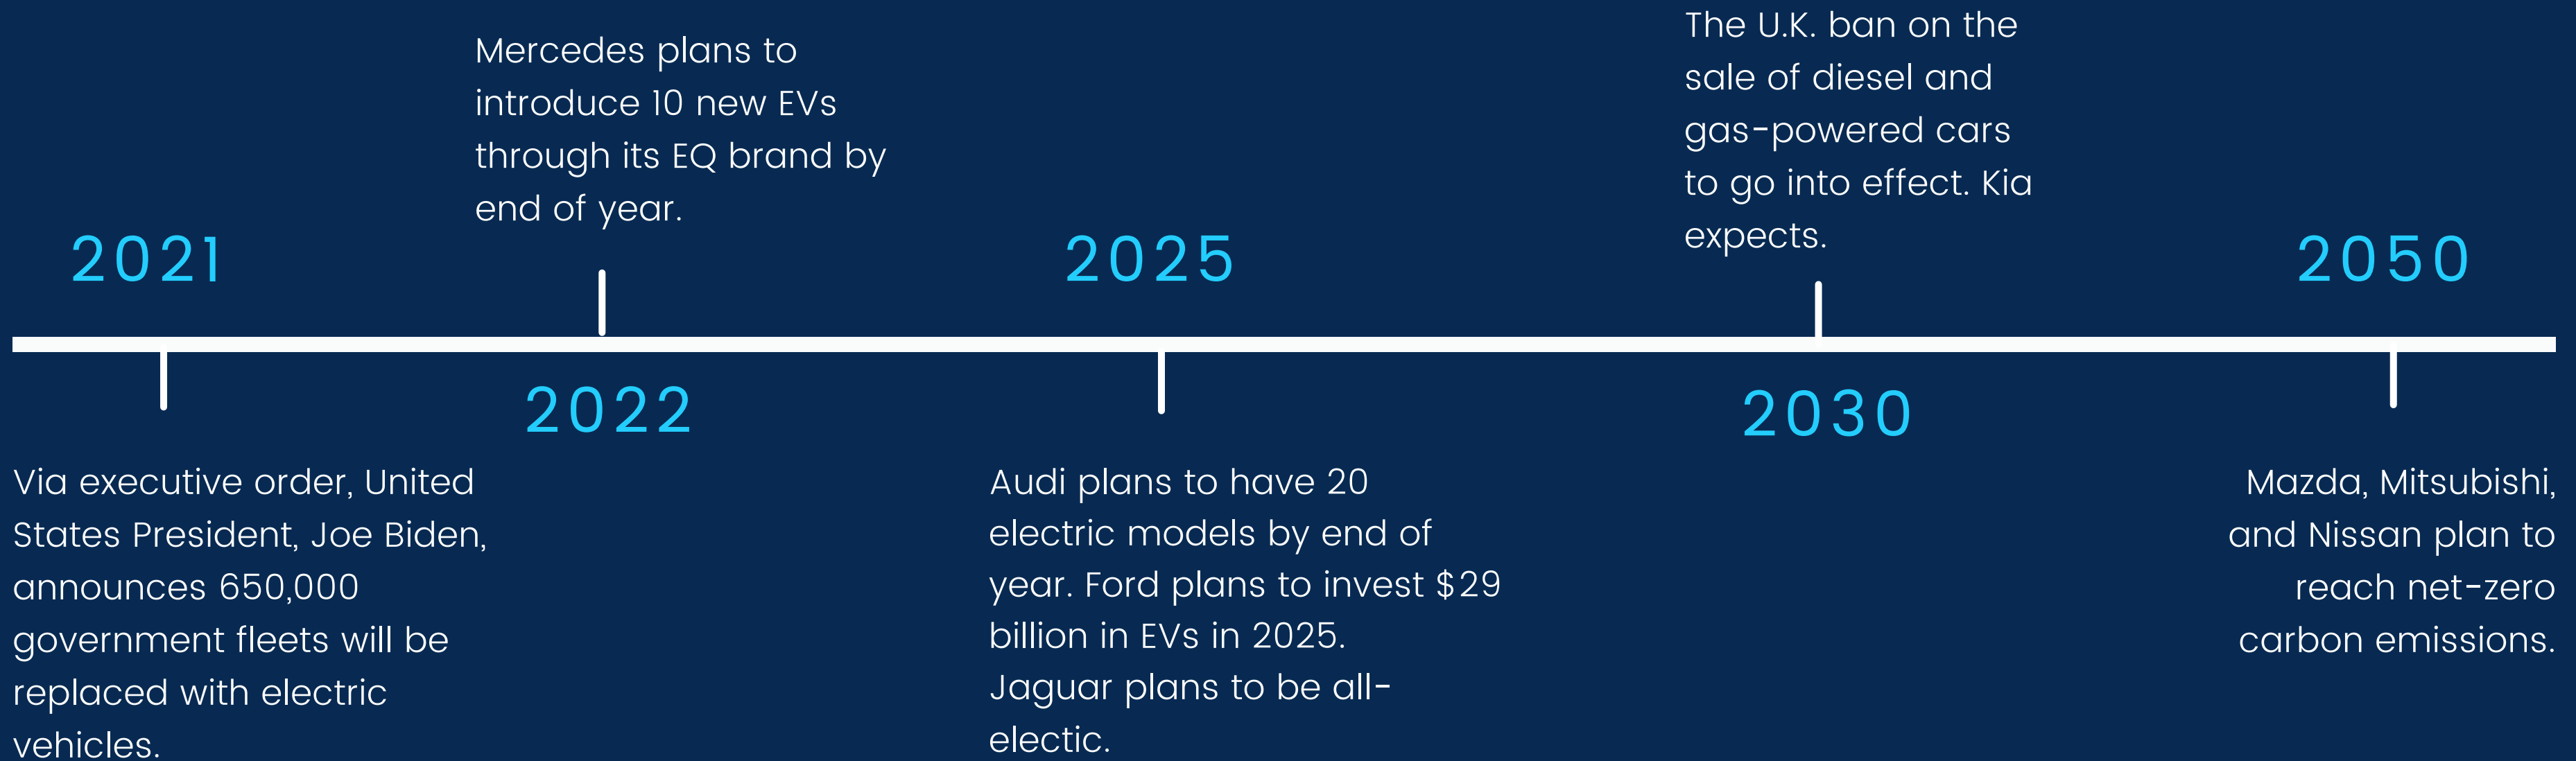

Our universal fit hardware allows it to be installed today on a diesel-powered vehicle and later installed on electric vehicles as you transition your fleet for the future.

## One Piece of Hardware Unlimited Compatibility

# The Future Of Electric

## THE FUTURE OF FLEETS

## OUR COMMITTMENT TO SAFETY

Sturdy Automotive doesn't just provide better visibility into fleet safety, we plant cultural and behavioral seeds of change that save lives.
